Data Science Lab-10

Q1. Create a class singly **CircularLinkedList**

1. Contains
 - a. Data
 - b. Next
2. Functions
 - a. **Add_in_begginning (Most Important)**
 - i. Receives New data
 - ii. Add new Node in the start of the linked list
 - b. **Add_at_particular_position**
 - i. Add new data
 - ii. Add Position value
 1. I.e if position value is 2 it means that add new node after 3rd node considering first node starts from 1th position
 - c. **Add_at_the_end**
 - i. Receives new data
 - ii. Add new Node at the end of the linked list
 - d. **Print Entire LinkedList**
